

High Speed Quad Channel Digital Isolator

GENERAL DESCRIPTION

The SiLM574x devices are high performance, quad channel digital isolator with 5.0 kVRMS (SOP16W) isolation rating per UL1577. The SiLM574x devices provide high electromagnetic immunity and low emissions at low power consumption.

The SiLM5740 device has all channels in the same direction, the SiLM5741 device has three channels in forward direction and one channel in reverse direction, and the SiLM5742 device has two channels in forward direction and two channels in reverse direction. In the event of input power or signal loss, the default output is high for devices without suffix F and low for devices with suffix F.

APPLICATION

- Isolated line receiver
- Microprocessor system interface
- Digital isolation for A/D, D/A conversion
- PLC, ATE input/output isolation
- Power transistor isolation in motor drives
- Isolation of high-speed logic systems

FEATURES

- Data rate 100Mbps
- Propagation delay 12ns (Typ)
- CMTI 100kV/us (Min)
- Low power consumption: 1.5mA/Channel (Typ) at 1Mbps
- Wide supply voltage: 2.25V to 5.5V
- 2.25V to 5.5V level translation
- Default output High (SiLM574x) and Low (SiLM574xF) Options
- Robust electromagnetic compatibility (EMC)
 - System Level ESD, EFT, and surge immunity
 - ± 8 kV IEC 61000-4-2 contact discharge protection across isolation barrier
 - Low emissions
- Operation temperature: -40°C to $+125^{\circ}\text{C}$
- Safety certifications:
 - 5.0kVRMS isolation for 1 minute per UL 1577
 - CQC certification per GB4943.1-2022
 - TUV certification per IEC 61010-1: 2010+A1 and IEC 62368-1: 2018
 - DIN VDE 0884-17: 2021-10 (Pending)

ABSOLUTE MAXIMUM RATINGS

Symbol	Definition	Min.	Max.	Units
V _{CC1} , V _{CC2}	Supply voltage, VCC1 and VCC2	-0.3	6	V
V _I	Voltage at Inx, referenced to input side ground	-0.3	V _{CC} +0.3	V
V _{OUT}	Voltage at OUTx, reference to output side ground	-0.3	V _{CC} +0.3	V
I _O	Output Current	-15	15	mA
T _J	Junction temperature	-55	150	°C
T _S	Storage temperature	-65	150	°C

Note:

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the Recommended Operation Conditions is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. All voltage parameters are referenced to local ground terminal, GND1 or GND2.

RECOMMENDED OPERATION CONDITIONS

FEATURE DESCRIPTION

The SiLM574x devices are high-performance, four-channel digital isolators with default output state options to enable a variety of application uses. The supply voltage range is from 2.25 V to 5.5 V for both supplies, V_{CC1} and V_{CC2} . With innovative chip design and layout techniques, the electromagnetic compatibility of the SiLM574x devices has been significantly enhanced to improve the robustness of overall system.

Device Functional Modes

The Table 4 shows the functional modes of the SiLM574x.

Table 4. Function Table

$V_{CC1}^{(1)}$	$V_{CCO}^{(1)}$	Input (INx)	Output Enable (ENx)	Output (OUTx)	Function Description
PU ⁽²⁾	PU	H	H or open	H	Normal operation. The output is controlled by the input
		L	H or open	L	
		Open	H or open	Default	Default mode. When INx is open, the corresponding output goes to the default logic. The default is high for SiLM574x and low for SiLM574xF.
X	PU	X	L	Z	A low value of output enable causes the outputs to be high-impedance.
PD ⁽²⁾	PU	X	H or open	Default	Default mode. When VCCI is unpowered, channel output based on the default option. The default is high for SiLM574x and low for SiLM574xF.
X	PD	X	X	Undetermined ⁽³⁾	When VCCO is unpowered, channel output is undermined.

(1) V_{CC1} =Input side V_{CC} , V_{CCO} =Output side V_{CC} .

(2) PU=Powered up, $V_{CC} \geq 2.25V$; PD=Powered down, $V_{CC} \leq 1.7V$

(3) The outputs are in undermined state when $1.7 < V_{CC1}, V_{CCO} < 2.25V$

Power Supply Recommendation

A $0.1\mu F$ bypass capacitor is recommended at the input and output supply pins (V_{CC1} and V_{CC2}) to help ensure reliable operation. The capacitors should be placed as close to the supply pins as possible.
